⚠️ Warning
⚠️ Caution
⛔ Prohibited
⚠️ Required

Caution: If not followed, injury or damage may result.

⚠️ It is necessary to manufacture the frame with sufficient strength so that it endures the weight of the door and any impact upon opening/closing the door. Only use designated screws and ensure that they are fastened firmly. A frame with poor strength or loose screws might result in the door falling and causing injury.

⚠️ Do not try to use this product for anything other than its original purpose. Do not use any part for applications outside of its specification.

⚠️ Use in conjunction with a door closer is not recommended. For soft-close option, we recommend Sugatsune LDD-V or LDD-S door damper.

⚠️ Make sure to follow the designated dimensions, specifications, and horizontal/vertical angles. Make sure that the frame is not warped, since it may affect the movement of the door.

⚠️ This product is a part for architectural fittings. After installation, make sure to test the finished product thoroughly to ensure that it is well-functioning and safe. Please inform the end user about general precautions and safety to prevent improper use.

⚠️ Make sure to check the screws for slack at regular intervals (one month from first usage, half a year, and then one time every year is recommended).

INSTALLATION DRAWING (EXAMPLE)

CUT OUT DRAWING FOR DOOR AND DOORJAMB
Before installing base frame into the Doorjamb, check that it is oriented correctly. If the orientation is incorrect, the door cannot be installed.

**Caution**
- When adjusting the vertical position or the depth, loosen the screws 360-degree, then hold the door at the suitable position and re-tighten the screws. Use wedges to support the door. (Tightening torque is 4.9 N·m.)
- When adjusting horizontal position, turn Horizontal adjustment screw. (There are two screws per hinge.)

The gap between Door and Frame will be expanded by turning the screw clockwise.

**ADJUSTING DOOR POSITION**

The arrows should point in the direction of adjustment when the door is closed.

- When adjusting the vertical position or the depth, loosen the screws 360-degree, then hold the door at the suitable position and re-tighten the screws. Use wedges to support the door. (Tightening torque is 4.9 N·m.)
- When adjusting horizontal position, turn Horizontal adjustment screw. (There are two screws per hinge.)

The gap between Door and Frame will be expanded by turning the screw clockwise.

**Caution**
- Do not remove the depth adjustment screw. The door may fall and cause injury. When adjusting the horizontal position, turn the two screws a little, by the same amount. The hinge may be broken if you keep turning one screw only.
- Horizontal adjustment range is +3 mm/-2 mm. When turning the screw to the right, if you move the part more than 2 mm, the cover cannot be put on, since the part protrudes. If you still turn the screw, the door will fall.
